AWS EXIT RISK · ONE-PAGE SUMMARY

Demo organisation (synthetic data)

name contains 'prod' · 40 accounts · $9.9m a year on AWS · scanned 23 Oct 2026

Exit-risk score

39 /100

Moderate

By spend · 28 by no. of accounts

Exit risk is Moderate. Most workloads are portable, but the size of the estate makes an exit a large programme. Cost and time are not yet estimated for your organisation: answer the delivery questions under Exit model.

Cost and time are provisional. They use default delivery answers, not this organisation's: answer the questions under Exit model in the console.

High/Critical spend	High/Critical accounts	AWS-only services	Technical portability
27%	**6 of 40**	**19**	**41/100**
$2.7m a year	36% of spend	Redshift, DynamoDB, Lambda	High difficulty, by effort

Exit cost (one-off)	Exit window	Notice period	Commitments written off
$9m to $18m	**3 to 5.5 years**	**Does not fit**	**None**
90 to 200% of a year's spend	bound by team capacity	24-month notice, 42 over	all end before the fastest exit finishes

Spend by exit-risk tier: Portable 35% · Low 30% · Moderate 9% · High 19% · Critical 8%

WHAT WE FOUND

1. **27% of spend ($2.7m a year)** runs on 19 bespoke, AWS-only services that must be re-engineered: Redshift $746k a year (1 account), DynamoDB $530k (6) and Lambda $391k (10); 16 others $1.0m.
2. **Technical portability 41/100 (High difficulty):** 59% of the work is on AWS-only services; 613 integrations to rebuild; 2 of 5 critical accounts hard to move.
3. **34 of 40 accounts are portable** (Low or Moderate risk). The 6 High or Critical accounts hold 36% of spend.

DECISIONS NEEDED

1. **Answer the delivery questions under Exit model** (CI/CD, Terraform, team size, day rate). Until then the cost and time figures use default answers, not your organisation's.
2. **Plan the hardest accounts first.** Write and test exit plans for data-platform-prod, cards-processing-prod and contact-centre-prod; they drive most of the cost and the timeline.
3. **Make portability a design criterion** for new work on Redshift, DynamoDB and Lambda: prefer the open-standard alternative in Appendix A unless the business case says otherwise.

ACCOUNTS THAT DRIVE THE EXIT

Account	Owner	Per month	Risk	Spend at risk / month	Main lock-in
data-platform-prod	Emma Botha	$133k	High · 59	$78k	Redshift, Glue
cards-processing-prod	Priya Shah	$101k	Critical · 74	$75k	DynamoDB, Lambda
contact-centre-prod	Lerato Mokoena	$34k	Critical · 84	$29k	Connect, Lex
payments-core-prod	Priya Shah	$116k	Low · 20	$23k	DynamoDB, Lambda
digital-channels-prod	Lerato Mokoena	$57k	Moderate · 39	$22k	Cognito, AppSync

WHO OWNS THE RISK

12 of 40 accounts with spend report to 4 executives or owners. 28 ($172k a month) have no owner tag.

Chris Ndlovu $109k/month at risk · 4 accounts
Alex Morgan $97k/month at risk · 2 accounts
Sam Patel $53k/month at risk · 3 accounts
Jordan Lee $25k/month at risk · 3 accounts

Confidence: Low. Synthetic demo data. Cost and time use default delivery answers, not yours. The deep scan reached accounts with 76% of spend. 1 service not in the catalog (0.1% of spend), scored as tier 3. Cost and time are ranges for a planning decision, not a delivery quote. Generated 23 Oct 2026 by aws-regulatory-risk-review-framework v0.14.4, scan 20261023-113629-5e6a. The full report has the method, every account and the data gaps.
